IMMUNIC G

IMMUNIC C ELIXIR

Ingredients

Energy essence: briar.

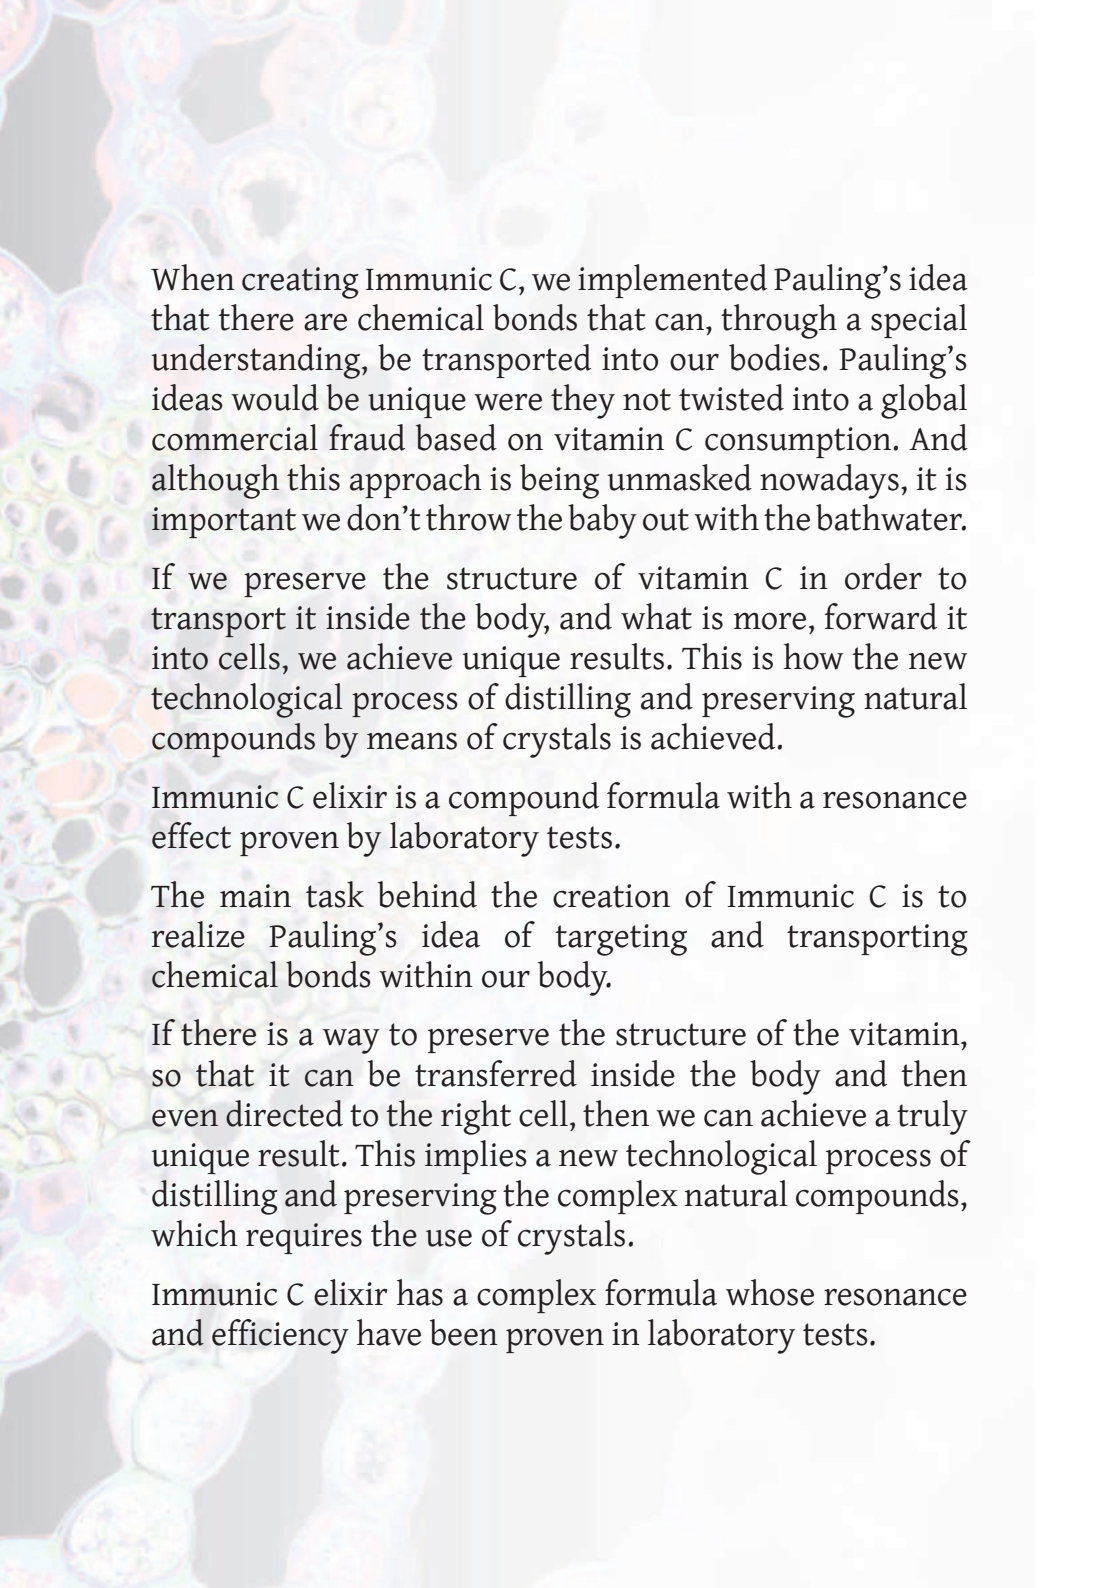

Crystal essence: red jasper, chalcopyrite, cyanite, garnet, crocoite, sphalerite, silver, zinc, copper.

Immunic C is designed to nourish and restore the immune system. It aids immunoactive vitamin C to enter the body directly, bypassing any oxidation processes. The basis of the elixir is the preservation of the natural properties and potential of ascorbic acid, or vitamin C, thanks to its special crystalline formula.

When taken properly, the vitamin C disintegrates before it gets inside, and can even become harmful if it is forced upon our body during its disintegration. When absorbed in its natural state (e.g. in a lemon), it can be bound by the tanning properties of tea, and this is the only way to assimilate it. Natural juice is beneficial only as a salivant, but is low in vitamins.

The ideas of Linus Pauling, a Nobel Prize winner, dominated the world narrative for a long time, and Americans eventually turned them into a business. Now, we can hardly even imagine the amounts of chemical junk (aka „vitamin C”) consumed in today’s world. These agents more often than not harm the immune system instead of restoring it. Vitamin C as understood by the wider population should be regarded as harmful to the immune system.

A background image showing a microscopic view of cells, likely from a tissue sample. The cells are stained, showing various shades of pink, purple, and blue, with prominent nuclei and cytoplasm. The image is slightly out of focus, giving it a soft, artistic feel.

When creating Immunic C, we implemented Pauling's idea that there are chemical bonds that can, through a special understanding, be transported into our bodies. Pauling's ideas would be unique were they not twisted into a global commercial fraud based on vitamin C consumption. And although this approach is being unmasked nowadays, it is important we don't throw the baby out with the bathwater.

If we preserve the structure of vitamin C in order to transport it inside the body, and what is more, forward it into cells, we achieve unique results. This is how the new technological process of distilling and preserving natural compounds by means of crystals is achieved.

Immunic C elixir is a compound formula with a resonance effect proven by laboratory tests.

The main task behind the creation of Immunic C is to realize Pauling's idea of targeting and transporting chemical bonds within our body.

If there is a way to preserve the structure of the vitamin, so that it can be transferred inside the body and then even directed to the right cell, then we can achieve a truly unique result. This implies a new technological process of distilling and preserving the complex natural compounds, which requires the use of crystals.

Immunic C elixir has a complex formula whose resonance and efficiency have been proven in laboratory tests.

Immunic C

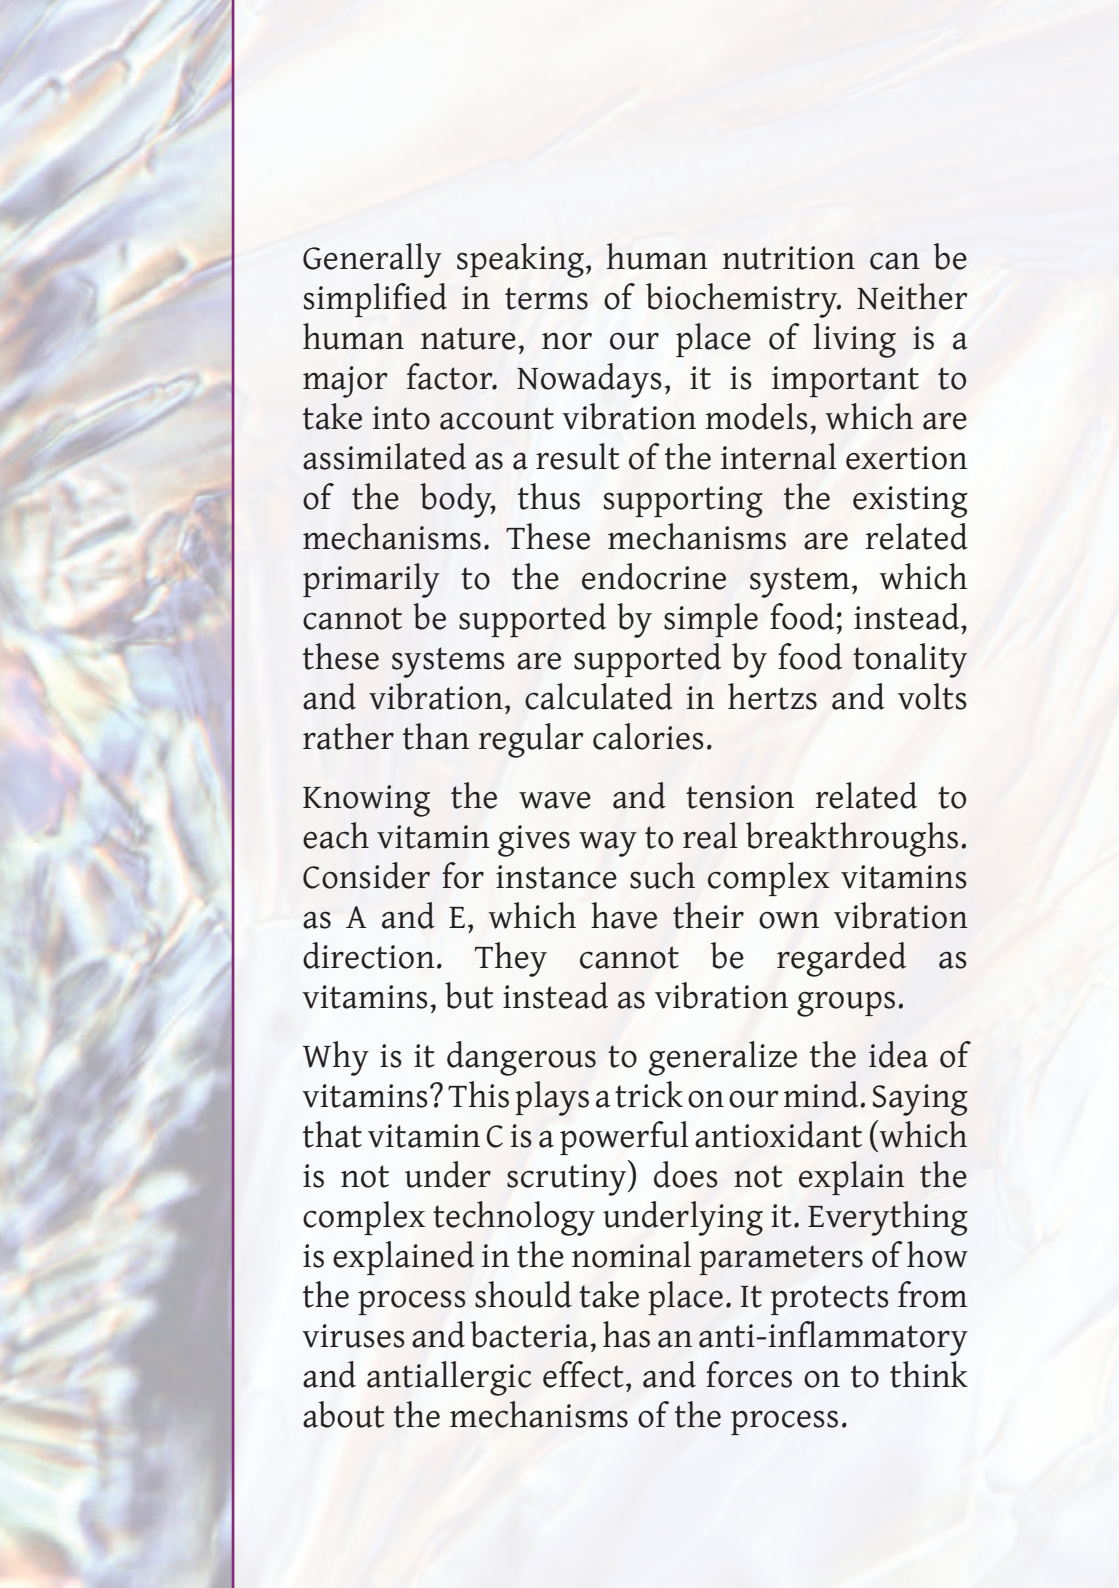

The active ingredient of Immunic C is briar, which has an effect on various secretions. In terms of nourishment and external alchemy, what matters is the pineal gland and the melatonin it secretes, which affects the cells of a number of endocrine glands (pituitary gland, thyroid, adrenal cortex), which might be regarded as their nourishment.

Immunic C can be taken as a preventive medicine, and could perhaps be an important medicine for treating cancer (clinical tests are not yet entirely complete).

Our basic energy is assimilated in cells (in mitochondria in particular), which is why we need oxygen. Vitamin C assimilation is facilitated by a different process thanks to a high-frequency resonance process in cells with a so-called endoplasmic reticulum nucleus. This process contributes to hormones synthesis.

In other words, a cell can assimilate primary energy when it is oxidized during this stress and the inner pressure inside the cell. Deep assimilation is made possible by the mineral crystalline grid present in Immunic C, which gets into cells and helps them assimilate and redirect the necessary energy without oxidizing.

When we eat more fruits and vegetables, that does not mean we are strengthening our immune system, we just are just suppressing it less, unlike those who eat a lot of rough food that takes more oxygen to be digested, and thus starts oxidation, during which free radicals are released.

Generally speaking, human nutrition can be simplified in terms of biochemistry. Neither human nature, nor our place of living is a major factor. Nowadays, it is important to take into account vibration models, which are assimilated as a result of the internal exertion of the body, thus supporting the existing mechanisms. These mechanisms are related primarily to the endocrine system, which cannot be supported by simple food; instead, these systems are supported by food tonality and vibration, calculated in hertz and volts rather than regular calories.

Knowing the wave and tension related to each vitamin gives way to real breakthroughs. Consider for instance such complex vitamins as A and E, which have their own vibration direction. They cannot be regarded as vitamins, but instead as vibration groups.

Why is it dangerous to generalize the idea of vitamins? This plays a trick on our mind. Saying that vitamin C is a powerful antioxidant (which is not under scrutiny) does not explain the complex technology underlying it. Everything is explained in the nominal parameters of how the process should take place. It protects from viruses and bacteria, has an anti-inflammatory and antiallergic effect, and forces on to think about the mechanisms of the process.

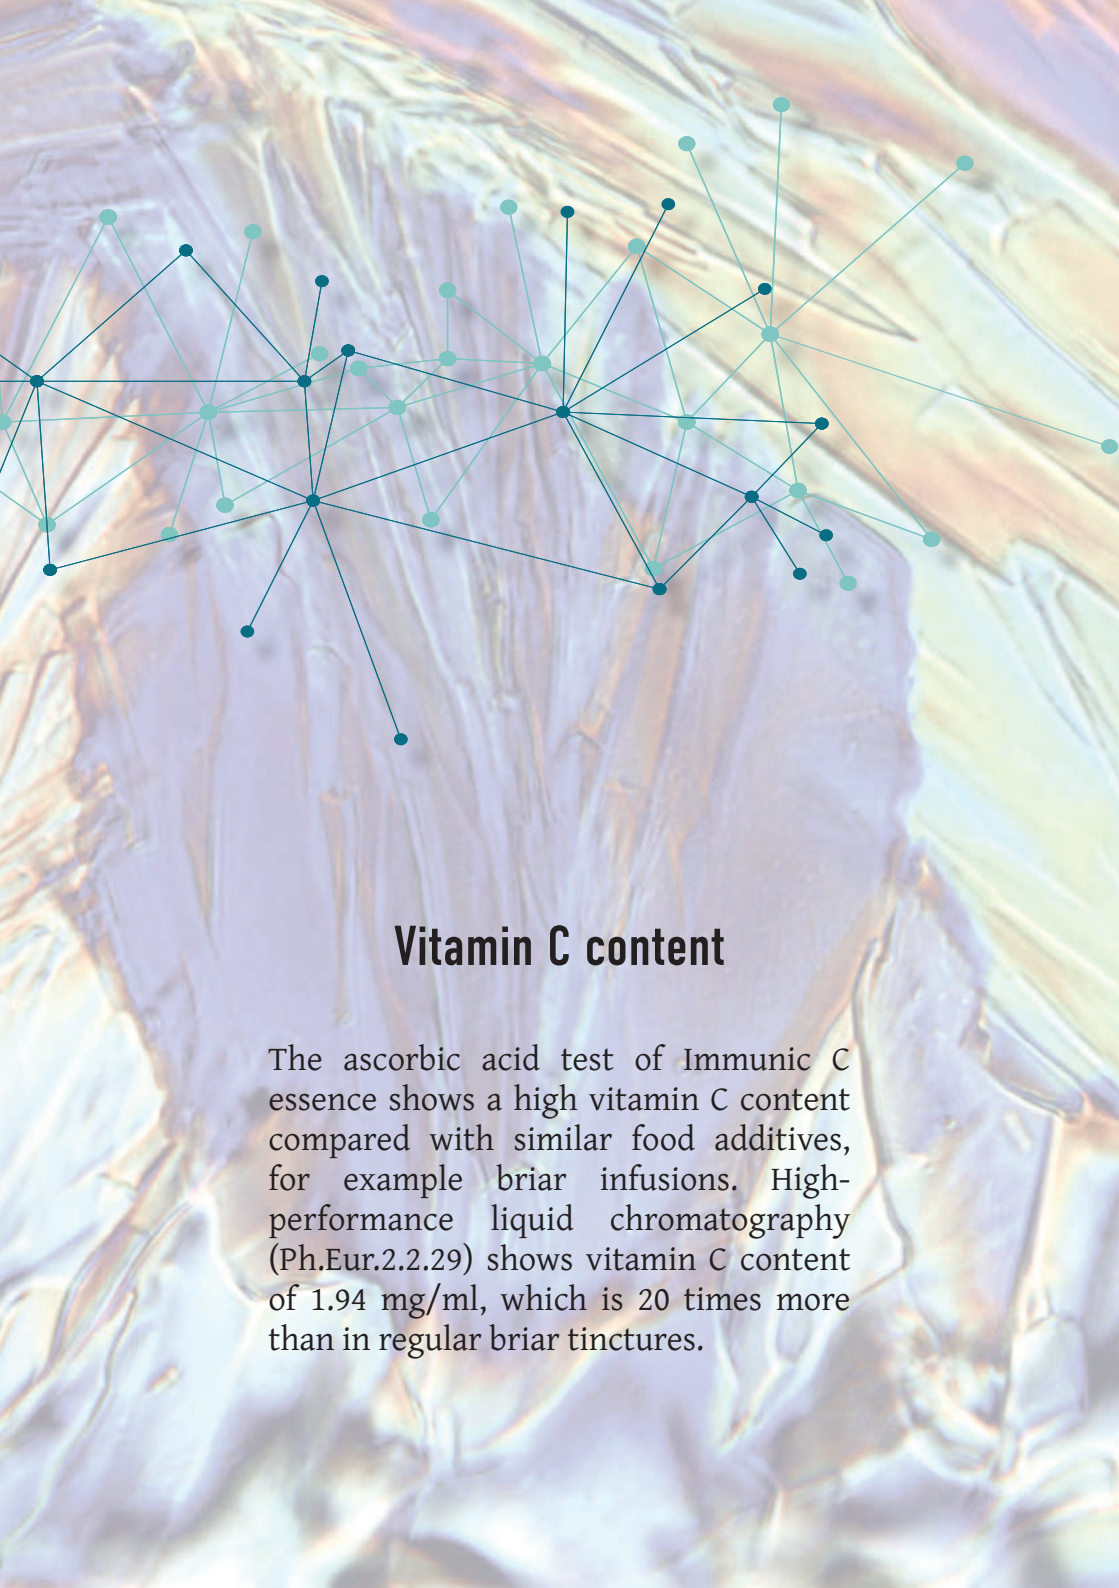

The hypothalamus is responsible for many processes in our body, which is why there must be a connection between ingesting something and forming the centers in our body that manage the process, as many processes in our body are uncontrollable, making the whole matter even more complex.

In point of fact, our body is tuned to a number of nutrient sources, perhaps the most fascinating thing about it. For instance, vitamin A is related to breathing sources, vitamin E - to the abdominal breathing area, while vitamin C is simply related to the stomach, or more specifically to the reaction of the stomach's endocrine system shown in the brain, which is the very basis of synthetic vitamin C.

This means that in the beginning, there is absolutely no difference between natural and synthetic vitamin C. The stomach responds to it and reports to the brain, while the brain signals the body to eat. If the product is natural, than it nourishes the body, if not, the body becomes stressed and starts seeking the vitamin out and generating it itself. The problem is that inside of us occurs a formulation with a negative effect on our body. This means it is better to just look at the lemon and drool over it thinking of vitamin C, which is healthier.

Immunic C elixir is a source of direct nutrition. This is an important property that helps avoid all temporary aberrations related to the nutrition process, or consumption of food by our body.

Vitamin C content

The ascorbic acid test of Immunic C essence shows a high vitamin C content compared with similar food additives, for example briar infusions. High-performance liquid chromatography (Ph.Eur.2.2.29) shows vitamin C content of 1.94 mg/ml, which is 20 times more than in regular briar tinctures.

Other elements

Immunic C conforms with all Bulgarian and European food safety standards, including the content of mercury Hg, cadmium Cd, zinc Zn, lead Pb and other heavy metals. The content of all these elements is several times below the lowest observed adverse effect level – from 2.5 (Cd) and 5.0 (Hg) to 19.2 (Zn). The content of manganese (Mn), another toxic element, is 61% below the tolerance level.

The content of less harmful, yet vital bioelements such as chrome Cr and copper Cu is 23 times below the LOAEL. Its high potassium content is an undeniable advantage for neurility.

The content of the above metals in Immunic C RDA is 1,000–10,000 times below the LOAEL, thus guaranteeing safety from toxicity.

№	Metal		Concentration in Immunic C mg/kg	Recommended daily allowance (RDA) of Immunic C: 5 drops (0.2 ml), mg/kg	Lowest Observed Adverse Effect Level (LOAEL) (mg/kg) or maximum daily amount (mg)
1	Lead	Pb	0, 18	0, 000032	0, 20 mg/kg
2	Cadmium	Cd	0, 02	0, 000003	0, 05 mg/kg
3	Mercury	Hg	0, 01	0, 000001	0, 05 mg/kg
4	Copper	Cu	0, 22	0, 000039	5, 00 mg/kg
5	Chrome trivalent	Cr	0, 44	0, 000078	0, 50 mg/kg
6	Zinc	Zn	0, 52	0, 000093	10, 00 mg/kg
7	Iron	Fe	3, 06	0, 000544	15, 00 mg
8	Manganese	Mn	2, 44	0, 000435	4, 00 mg
9	Sodium	Na	7, 91	0, 001409	N/A
10	Potassium	K	2089,18	0, 371874	N/A

External alchemy

In external alchemy, elixirs are a type of nutrition meant to stabilize body processes that can impede high energy assimilation. They play a support role in the system of external alchemy. In the nutrition yoga system, they are utilized to solve local issues.

The importance of this elixir lies in its ability to support the endocrine glands, and accordingly, endocrine profile regulation. Our body is at all times influenced by the brain's commands, which is why learning to take Immunic C is part of external alchemy.

Since Immunic C is primarily a regulator and stabilizer of our body, it is regarded as a base element in external alchemy, where we strive to understand how we can strengthen DNA strands, which is impossible without a well-tuned and activated brain.

Product characteristics

Immunic C is special because of its natural preservation of ascorbic acid. The elixir contains a charge of energy that invigorates, mobilizes you, and keeps you alert.

Immunic C nourishes the thymus and other endocrine glands responsible for forming the protective reactions of our body. The active alcohol preservative used when the elixir is being produced is another unique part of its composition.

Immunic C is a 100% digestible medicine that starts working once it begins interacting with the endocrine glands. It also nourishes the adrenal cortex, which proves product efficiency and resonance in the brain and thymus.

The effect of vitamins depends on the human brain and quality of the drug. The result is achieved only when the brain contributes to antioxidation. If this resonance fails, the vitamin cannot get where it needs to be, and no feedback takes place. This is the main feature of Immunic C: our body and mind have a proper reaction to it.

No medicine can be an antioxidant unless we know the mechanism of how it is released in our body. This is the most important yet complex aspect of consumption, and also why all efficient mechanisms supporting the immune system widely used in medicine nowadays are intravenous.

Immunic C solves this problem by means of a mineral additive that preserves the vitamin that becomes its container. Vitamin C becomes a certain vibration model that can resonate with the immune system, and this

IMMUNIC C

resonance should be tuned with this model, which is what the mineral container is meant for.

Normally our system generates the necessary vibration when it simply reacts. For example, when we take certain vitamins, our body reacts to the generation of the respective vibration. If the vibration is not begun, a non-resonated perturbation is caused, which implies stress from our inability to assimilate something, or we simply assimilate it through oxidation, which leads to quite the opposite, when free radicals or uncontrollable energy perturbations in cells are produced.

Immunic C works by strengthening DNA chains, nourishing cell membranes, strengthening blood vessels, and, most importantly, forming the body's response to the unnecessary processes of what is commonly referred to as an "immune response." In one way or another, this is related to the work of the entire body influenced by the brain's signals. That is why we should bear in mind how we take this elixir.

Use of Immunic C

Nowadays it has been scientifically proven that vitamin C is good for our body when brought up directly to the cells. However, if you are only eating natural fruits, you cannot achieve the optimal result. That is why intravenous injections of vitamin C are logical, as blood itself becomes both a preserver and a conveyor; but their efficiency has not yet been clinically proven.

The goal of Immunic C was to combine all these hypotheses into a single product. Specifically, vitamin C should be carefully extracted from nature (briar, in particular, as it is a plant that is dried and preserved with the help of this vitamin, as it contains an adequate mineral content). Secondly, it creates a conveyor to transport the vitamin

inside the body. Its mineral content fulfills this role for it to restore and nourish the metabolic processes.

Immunic C aids the formation of the T-cells of the immune system by keeping the body tense. This tension establishes a vector that causes the strengthening and nourishment of the myeloid tissue of red marrow.

Thereby, crystals turn this elixir „smart,” as they respond to their tasks, which is critical, as vitamin C is not produced in the human body, and many processes must be adapted. Immunic C is also healthy because of vitamin K, which briar is rich in, and which is good for strengthening and feeding marrow, and for blood cell synthesis.

Immunic C can be used for a variety of nervous system issues, or taken as a food additive. It helps adapt to both the body's inner and outer insufficiencies, such as having to recover after a long flight.

Immunic C's formula regulates the biochemical processes of our body. Due to its unique formula, the elixir is a target drug that feeds the more complex molecular compounds in our body. Endocrine synthesis helps keep the body and mind stable.

This product helps form muscle cells for people under 30, and bone cells for anyone older. It contributes to the regulation of the body's processes, as well as metabolism and detoxification, prevents the body from falling out of tune, and is a fortifying agent. It is also healthy for pregnant women, as it helps develop the immune system of the fetus.

It is regarded as an important source of food for the brain in the nutrition of the future, as well as external alchemy, which has been proven by clinical tests. It nourishes the adrenal cortex, which proves the product's efficiency, and the resonance in the brain and thymus.

The elixir should be taken carefully, and several rules must be followed.

The vitamin is intended above all to start the work of the endocrine system. It is not just a food additive, which is why we should use its capabilities to stimulate and keep the system working and help it generate an

Usage instructions

adequate response. Otherwise, we end up feeding the useless processes along with the useful ones, to say nothing of the harmful ones, as happens to those who often ingest food additives.

The essence should be taken on a regular basis and at different times of the day when our bodies are activated differently. You should take it carefully, never using more than is recommended. People under 21 should take it only under the recommendation of a doctor.

Abstain from eating one hour before and a half an hour after taking the drug.

When taken seven days a week, a single dose is one drop.

Hold Immunic C in your mouth to let it disinfect both the saliva and oral cavity, and after that swallow it. But do so for no longer than three seconds, or oxidation will set in! You should accumulate saliva before taking the drug.

When taken 3 to 5 times a week, a single dose is 2 to 3 drops.

When taken 1 to 2 times a week, a single dose is 3 to 5 drops.

If fast recovery is needed, a single dose can be 5 to 7 drops at different times of the day (starting in the morning) during a week.

Wash it down immediately with warm tea. It is most efficient when taken in the morning while the body is still asleep. It should be taken and immediately washed down.

Pregnant women should take one drop three times a day, two times a week.

For pregnant women - twice a week 1 drop three times a day.

Elixir production

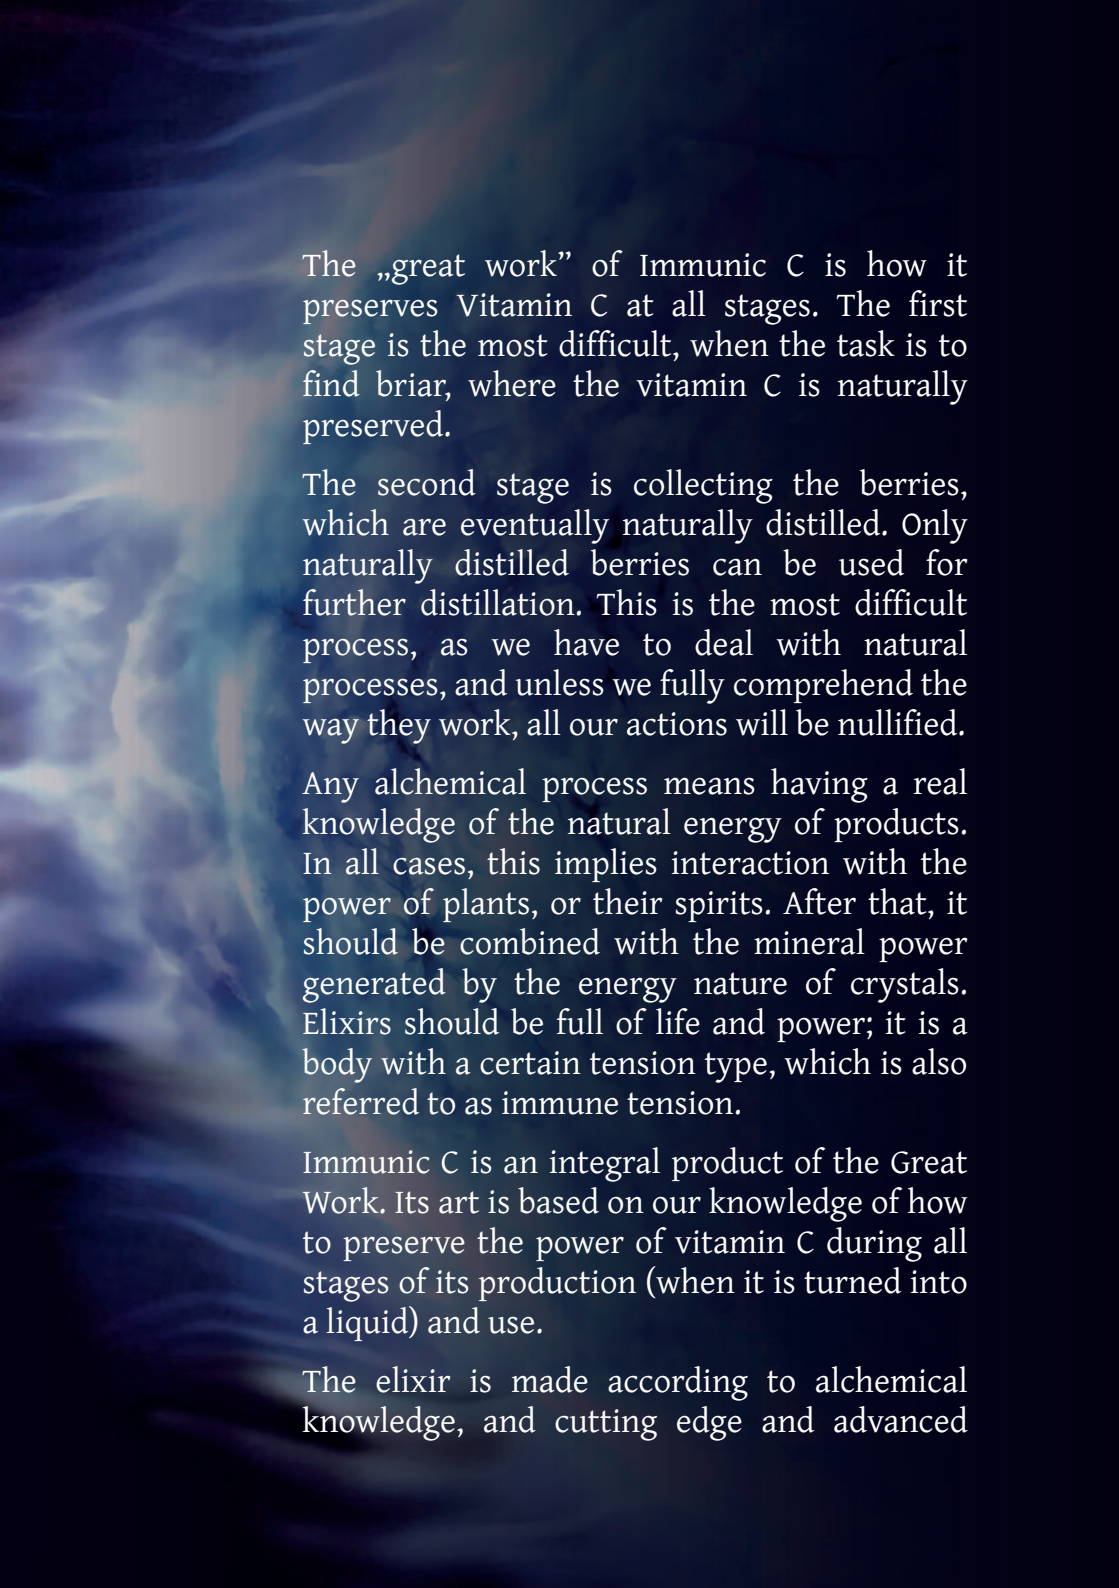

The essence is produced in a specialized laboratory. In its creation, a stepwise process of preparation and processing takes place that includes several stages:

- Collecting and preparing briar berries after they ripen
- Natural mineral distillation
- Distillation during ripening
- Dry distillation
- Distillation
- Infusion and adjustment
- Mineral selection and preparation
- Energetic cleansing of minerals
- Creating crystal mineral additives
- Elixir body nourishment
- Derivation of the integral strength of vitamin C
- Embryonic nurturing of the vitamin C's geometry
- Substance fixation

After subject to these processes, the essence emerges as a ready-to-use liquid substance.

Opus Magnum

The „great work” of Immunic C is how it preserves Vitamin C at all stages. The first stage is the most difficult, when the task is to find briar, where the vitamin C is naturally preserved.

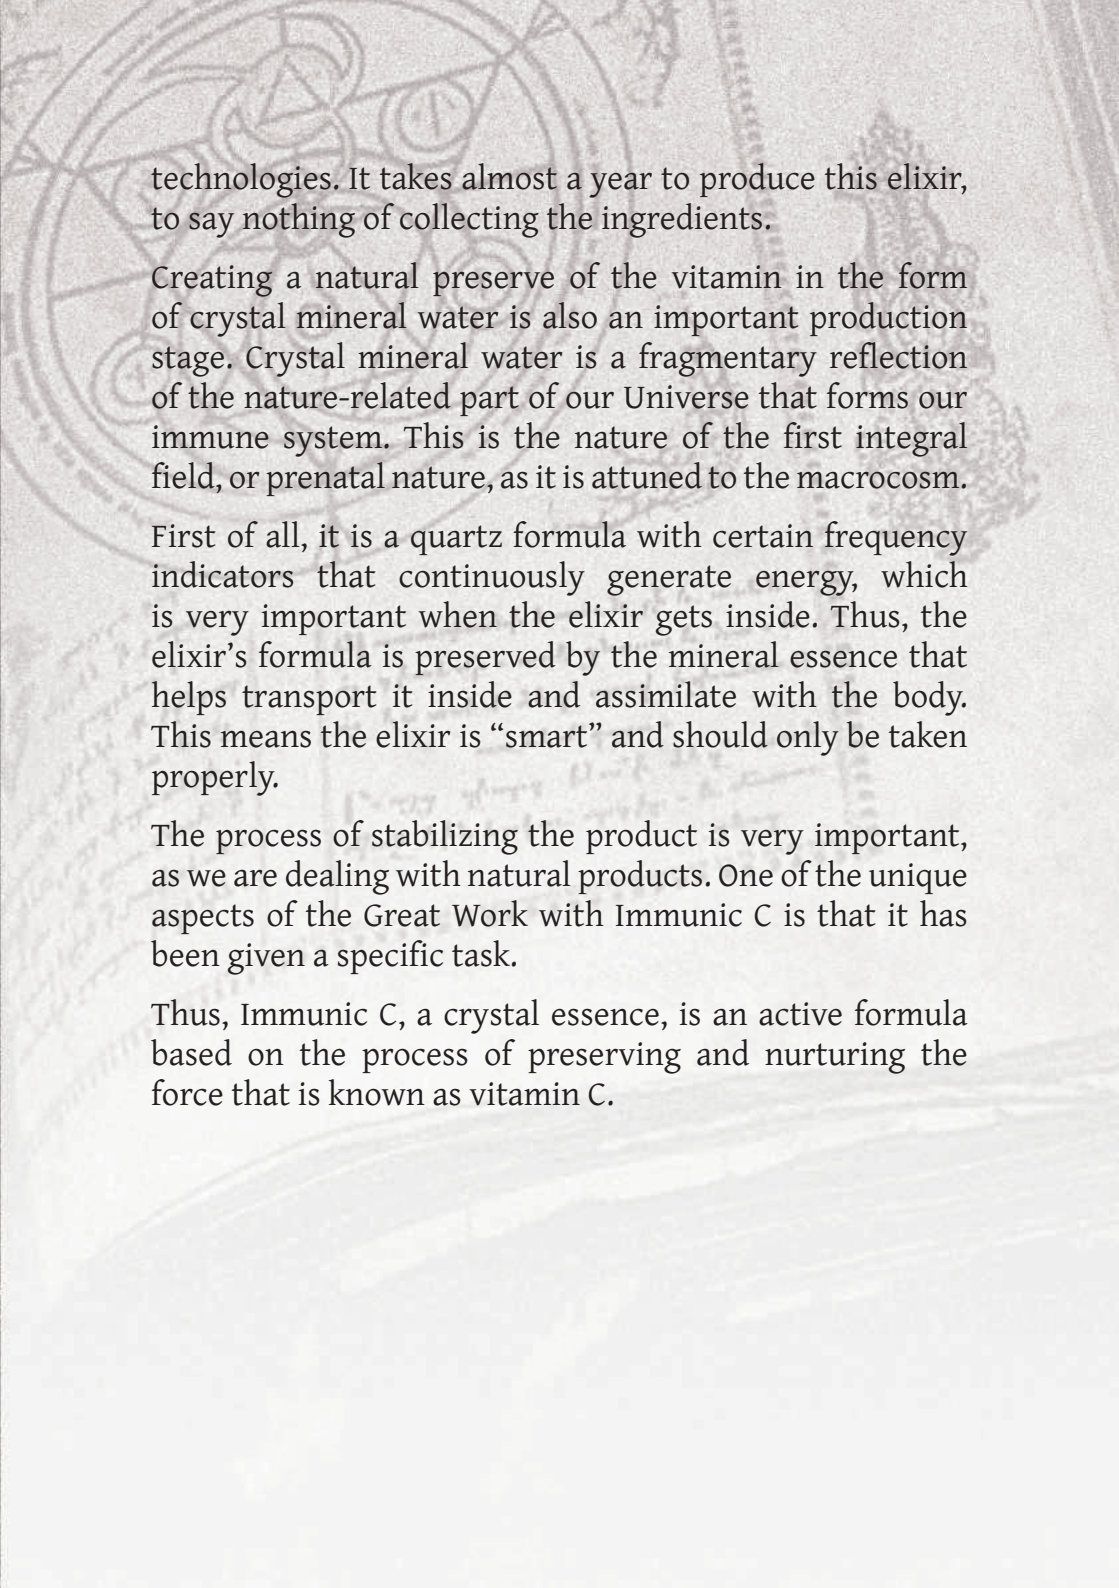

The second stage is collecting the berries, which are eventually naturally distilled. Only naturally distilled berries can be used for further distillation. This is the most difficult process, as we have to deal with natural processes, and unless we fully comprehend the way they work, all our actions will be nullified.

Any alchemical process means having a real knowledge of the natural energy of products. In all cases, this implies interaction with the power of plants, or their spirits. After that, it should be combined with the mineral power generated by the energy nature of crystals. Elixirs should be full of life and power; it is a body with a certain tension type, which is also referred to as immune tension.

Immunic C is an integral product of the Great Work. Its art is based on our knowledge of how to preserve the power of vitamin C during all stages of its production (when it is turned into a liquid) and use.

The elixir is made according to alchemical knowledge, and cutting edge and advanced

technologies. It takes almost a year to produce this elixir, to say nothing of collecting the ingredients.

Creating a natural preserve of the vitamin in the form of crystal mineral water is also an important production stage. Crystal mineral water is a fragmentary reflection of the nature-related part of our Universe that forms our immune system. This is the nature of the first integral field, or prenatal nature, as it is attuned to the macrocosm.

First of all, it is a quartz formula with certain frequency indicators that continuously generate energy, which is very important when the elixir gets inside. Thus, the elixir's formula is preserved by the mineral essence that helps transport it inside and assimilate with the body. This means the elixir is "smart" and should only be taken properly.

The process of stabilizing the product is very important, as we are dealing with natural products. One of the unique aspects of the Great Work with Immunic C is that it has been given a specific task.

Thus, Immunic C, a crystal essence, is an active formula based on the process of preserving and nurturing the force that is known as vitamin C.

About the Essence Creator

Jie Kong is a Taoist alchemist more widely known by his secular name Oleg Cherne. For more than 35 years he has been researching various systems of development, among which Taoism is considered his main focus. He has authored more than 50 books related to human development and recovery issues, which have been released in Russian, English, Spanish and Bulgarian.

Jie Kong received his name from a Taoist hermit, the immortal U Bei. He works to both develop and systematize knowledge in external alchemy associated with bodily change and improvement. After practicing the Art of the Yellow and White (the internal name for Taoist alchemy) for over 35 years, he has studied and tested a range of nutritional systems, and has formulated a firm position that food should develop the body, and not just fill you up.

Using Taoist medicine and the teachings of Taoist alchemy about body crystallization as a basis, he has created the Nutri-Q Yoga system, aimed at a transformation of the body from a lower state to a higher one through integral nutrition. The system is based on using products that do not decay the body, and are founded on the principles of crystal nutrition.

By combining all his accumulated knowledge of Taoist alchemy with the newest possibilities in modern technology, he has created a unique model of human development. During his study of the different ways to extend and transform life, he was able to put his knowledge to practice after meeting with Swiss alchemists, the

successors of Paracelsus, who possess the knowledge of how to transform the crystal into a product fit for nutrition.

This helped Jie Kong create a high-vibration nutritional system based on nutrition yoga with its fundamental principle as a lack of dependence on bulky food. Although Jie Kong indeed puts forth the idea of high-vibration, high-molecular nutrition, he defines his objective as not to wean a person from eating, but to teach them how to be independent from food: „I see a way to perfection in the Nutri-Q Yoga system, not just taking some particular food as the narrow focus of a limited diet.”

After trying out various nutrition systems on himself, researching, experimenting with a large quantity of existing high-energy plants and herbs, and testing dozens of crystalline extracts from crystals, Jie Kong has created a structural system of nutrition based on nourishing, strengthening and developing the brain: „In any development, everything depends on the quality, strength, and most importantly, the adequacy of the brain,” says Jie Kong.

Although the teachings of Jie Kong are unique, he relies in his research and achievements on his mentors and, most importantly, on those, as he says so himself, „who have been able to successfully apply nutrition yoga in their daily lives.”
